

# Year 3 History - The Stone Age, Bronze Age, Iron Age and the Roman Invasion of Britain

## Stone Age

People were hunter gatherers but became more settled and started farming during the Neolithic period.

They made tools and weapons from flint. They learnt to control fire so they could keep warm, cook and protect themselves.

## Bronze Age

They developed settlements to live in and keep enemies out.

People discovered how to make bronze and this meant they could make stronger weapons and tools. The wheel was invented.

## Iron Age

Hillforts were built as there was more fighting between Celtic tribes and they had stronger, better weapons.

Inventions of the plough and rotary quern-stone made food production easier.

## Roman Invasion

Emperor Claudius and his army successfully invaded Britain in 43AD.

They invaded Britain because they wanted the cattle, precious metals, land and the people.
